## (54) COMMUNICATION METHOD

### (57)Abstract:

PURPOSE: To guarantee requested quality by specifying a packet position inside a frame by a call processing node for communication for requesting a band guarantee and a fluctuation delay time guarantee.

CONSTITUTION: Terminals B-TB\* 21-23 report a request band and a fluctuation delay time along with a call origination request to the call processing node B-NT2 24. From the call reservation conditions of a call during the communication at present, the request band and the fluctuation delay time, the node 24 permits call reception when the call can be received, changes the reservation condition setting area 31 of the cell to be used for the call to 'reserved' and specifies the position of the using cell to the terminal which requested the call. The terminal performs transmission using the cell at the specified position.
